

WE EMBRACE THE FOUR PRINCIPLES OF ORGANIC AGRICULTURE

AND HERE'S HOW WE DO IT

As a leading and experienced organic wholesaler, we at DO IT ORGANIC are deeply committed to the core principles that drive the global organic movement. These principles—**CARE**, **HEALTH**, **ECOLOGY**, and **FAIRNESS**—are the foundation on which organic agriculture stands and evolves. They highlight the vital role that organic agriculture plays in creating a greener, cleaner, and more ethical global food and agricultural system.

The principles strongly influence our approach in the organic market. We emphasize these values by elaborating on how they guide our operations.

In this document we'll show you how we commit to these principles.

Cherish the health
of nature

CULTIVATING A BALANCED FUTURE

PRINCIPLE OF CARE

*Organic agriculture should be managed in a precautionary and responsible manner to protect the health and well-being of current and future generations and the environment.**

By practicing organic agriculture we prevent significant risks. We do this by adopting appropriate techniques and rejecting unpredictable ones. This way we ensure healthy, safe and ecologically sound food.

We make decisions that reflect the values and needs of those who might be affected. We act with precaution and care.

SUPPORTING THE WELL-BEING OF ALL

PRINCIPLE OF HEALTH

*Organic agriculture should sustain and enhance the health of soil, plant, animal, human and planet as one and whole.**

As an organic specialist, we take our responsibility to sustain and enhance the health of our ecosystems.

We focus on contributing to preventative care and well-being. By rejecting fertilizers, pesticides, and chemical additives, we prioritize the health of the environment and all who depend on it.

WORKING IN HARMONY WITH NATURE

PRINCIPLE OF ECOLOGY

*Organic agriculture should be based on living ecological systems and cycles, work with them, emulate them and help sustain them.**

Driven by the understanding that healthy soils and thriving ecosystems are essential for sustainable agriculture, we aim to work in harmony with nature together with organic farmers that produce delicious, nutritious food. By prioritizing biodiversity and ecosystem protection, we ensure food security and strengthen the resilience of food systems while contributing to the well-being of both people and planet.

CREATING FAIR RELATIONSHIPS

PRINCIPLE OF FAIRNESS

*Organic agriculture should build on relationships that ensure fairness with regard to the common environment and life opportunities.**

We help to provide everyone involved with organic agriculture with a good quality of life, and contribute to food sovereignty and reduction of poverty. Supporting fair systems means we work with open and equitable chains, ensuring fairness at all levels and to all parties.
